## APPRECIATION LETTER

We would like to express our sincere appreciation for the **Motex Stenter** supplied & installed at our plant by **InspirOn** in April 2024.

The machine is being effectively utilized for processing fabrics made from substrates such as Cotton, Polyester, Viscose, Lycra and their blends. It supports a wide range of applications including heat-setting, stretching, drying, padding-curing, and finishing.

We are consistently achieving a production output of **60,000 meters** per day from Stenter. In our assessment, **Motex** stands out significantly better compared to its competitors in terms of performance, mechanical and electrical design, metallurgy, utility efficiency, and overall workmanship.

We would also like to commend the dedication and professionalism of the **InspirOn** team during the erection and commissioning of the machine, as well as their continued technical support.

We look forward to strengthening and continuing our association with your esteemed company.

For, M/s. Microtex Processors Pvt. Ltd.

Sandeep .C. Patani
